

Franky Theme Discounts — Client Guide

Cart Discounts in the Franky Theme — Client Guide

A short guide explaining where and how to change discounts in Shopify admin.

Main Rule

Discounts are managed in **three places** depending on the discount type:

1. **Customizer** (theme) — shows the discounted price on the product page (for all types)
2. **Every Possible Discount** (Admin → Apps) — applies Packs / Bundle / Pre-order discounts at checkout
3. **Loop Subscriptions** (Admin → Apps) — applies the subscription discount at checkout

If you change only one of them, the customer will see one price on the site and a different price at checkout. **Always update all relevant places.**

How Every Possible Discount is Set Up

The app has 5 active discount functions (Tiered, Automatic). Each one covers a specific scenario:

Function	When it applies	Type
<code>packs_standard</code>	Packs mode, regular purchase	Fixed amount per item
<code>packs_preorder</code>	Packs mode + pre-order	Fixed amount per item

Function	When it applies	Type
<code>bundle_standard</code>	Bundle mode, regular purchase	Tiered Percentage
<code>bundle_preorder</code>	Bundle mode + pre-order	Tiered Percentage
<code>classic_preorder</code>	Classic mode + pre-order	Tiered Percentage

When a product is added to the cart, the theme automatically attaches a "tag" (`_mc_discount_bucket`) with the matching value, and the app finds the corresponding function and applies its tiered discount.

How Discounts Stack at Checkout (Important!)

Shopify checkout stacks discounts **linearly** off the variant base price:

```
final = (variant × Loop_subscription_%) - EPD_fixed_amount_per_item
```

First Loop subtracts 15% (if subscription is selected), then EPD subtracts the fixed pack discount. This affects how the EPD values are configured — for pre-order, for example, EPD must account for **both pack discount and pre-order discount** combined.

Discount Types

1. Pack quantity discount — Fixed price per unit

Currently: - 1 Bag → \$39.95/ea - 2 Bags → \$37.95/ea (-\$2 from base) - 3 Bags → \$35.95/ea (-\$4 from base)

Where to change it:

- **PDP price:** Customizer → section **Maison PDP Hero** → **Pack Option** blocks → `Price per unit (cents)` field
 - `3995` = \$39.95
 - `3795` = \$37.95
 - `3595` = \$35.95

- **Checkout discount:** Admin → Apps → Every Possible Discount → function `packs_standard`
→ tiers (Fixed amount per item):
 - 1 → \$0.00 off
 - 2 → \$2.00 off
 - 3 → \$4.00 off

2. Pre-order discount

A discount for products that are currently out of stock (pre-order). Currently -15% from base.

Where to change it:

- **PDP %:** Customizer → **Theme settings** → **Pre-Order** → `Pre-Order Discount %` (e.g. `15`)
- **Checkout discount:** Admin → Apps → Every Possible Discount → function `packs_preorder`
→ tiers:
 - 1 → \$5.99 off (= 15% of \$39.95)
 - 2 → \$7.99 off (= \$5.99 pre-order + \$2.00 pack discount)
 - 3 → \$9.99 off (= \$5.99 pre-order + \$4.00 pack discount)

3. Subscription discount (Subscribe & Save)

Discount for subscribing. Currently -15%. Applied **not through Every Possible Discount**, but through **Loop Subscriptions** (selling plan).

The subscription has 3 plans, each tied to a quantity:

Quantity	Plan ID	Frequency
1 Bag	#5080383721	Every 4 weeks
2 Bags	#5271978217	Every 6 weeks
3 Bags	#5272010985	Every 8 weeks

Where to change it:

1. **PDP multiplier:** Customizer → section **Maison PDP Hero** → `Subscription Multiplier`
(`0.85` = 15% off)
2. **Plan ID per pack:** Customizer → section **Maison PDP Hero** → **Pack Option** block → `Subscription Plan ID (Loop)` field for each quantity

3. **Frequency Label per pack:** Customizer → section **Maison PDP Hero** → **Pack Option** block → `Frequency Label (subscribe card)` field (e.g. "Deliver every 4 weeks")
4. **Loop discount:** Admin → Apps → Loop Subscriptions → open each plan → `discount` field (all should match — `15.00%`)

All 4 values must match — otherwise PDP shows one price and checkout shows another.

4. Bundle discount

Discount based on the number of items added to the bundle (2, 3, 4+).

Changing this requires a developer — values are hardcoded in the theme (Tiered Percentage in EPD also needs updating).

Current values: - 2 items → 20% - 3 items → 25% - 4+ items → 30%

How Discounts Combine (Examples)

Scenario	PDP & Cart show
1 bag, one-time	\$39.95
2 bags, one-time	\$75.90 ($\37.95×2)
3 bags, one-time	\$107.85
1 bag, subscribe	\$33.96 (Loop -15%)
2 bags, subscribe	\$63.92 ($\$33.96 \times 2 - \4 EPD)
3 bags, subscribe	\$89.88
1 bag, pre-order, one-time	\$33.96
2 bags, pre-order, one-time	\$63.92
2 bags, pre-order, subscribe	\$51.94

Quick Reference Table

What to change	Where
Pack price per unit (PDP)	Customizer → PDP Hero → Pack Option → Price per unit (cents)
Pack price (checkout)	Admin → Apps → EPD → packs_standard → tier discount
Pre-order % (PDP)	Customizer → Theme settings → Pre-Order
Pre-order checkout discount	Admin → Apps → EPD → packs_preorder
Subscription % (PDP)	Customizer → PDP Hero → Subscription Multiplier
Subscription % (checkout)	Admin → Apps → Loop Subscriptions → each plan
Subscription plan ID per pack	Customizer → PDP Hero → Pack Option → Subscription Plan ID (Loop)
Subscribe frequency text	Customizer → PDP Hero → Pack Option → Frequency Label
Enable pre-order on a product	Customizer → PDP Hero → Enable Pre-Order
Bundle %	Theme code (developer required)

Examples

Change the 2-pack price from \$37.95 to \$36.95

1. Customizer → PDP Hero → "2 Bags" block → Price per unit (cents) : 3695
2. Admin → Apps → EPD → packs_standard → tier for 2 → \$3.00 off (= \$39.95 – \$36.95)
3. Admin → Apps → EPD → packs_preorder → tier for 2 → \$8.99 off (= \$5.99 pre-order + \$3.00 pack)
4. Save everywhere

Change the pre-order discount from 15% to 20%

1. Customizer → Theme settings → Pre-Order → Pre-Order Discount % : 20
2. Recalculate pre-order discount per item: $\$39.95 \times 0.20 = \7.99
3. Admin → Apps → EPD → packs_preorder → update tiers:
 - 1 → \$7.99
 - 2 → \$9.99 (= \$7.99 + \$2.00)
 - 3 → \$11.99 (= \$7.99 + \$4.00)

Add a new pack (e.g. 5 Bags @ \$33.95/ea)

1. Customizer → PDP Hero → add a **Pack Option** block:
 - Pack Name : "5 Bags"
 - Number of Bottles to Display : 5
 - Price per unit (cents) : 3395
 - Subscription Plan ID (Loop) : new plan ID from Loop (you need to create one in Loop first)
 - Frequency Label : "Deliver every 14 weeks" (for example)
2. Admin → Apps → EPD → packs_standard → add tier: 5 → \$6.00 off
3. Admin → Apps → EPD → packs_preorder → add tier: 5 → \$11.99 off
4. Admin → Apps → Loop Subscriptions → create a new plan with 15% discount (if not yet)

Disable the pre-order discount

1. Customizer → Theme settings → Pre-Order → Pre-Order Discount % : 0
2. Admin → Apps → EPD → disable functions packs_preorder , bundle_preorder , classic_preorder (toggle on the right)

Change subscription discount from 15% to 20%

1. Customizer → PDP Hero → Subscription Multiplier : 0.80
 2. Admin → Apps → Loop Subscriptions → open each plan (4w / 6w / 8w) → change discount to 20.00%
-

Cart Merge Behaviour

When a pack is added to the cart, the theme **automatically merges** with an existing line item (same variant + same mode + same pre-order state, combined qty $\leq$ 3) and reassigns the correct plan ID.

Example: - Cart: 1 Bag subscribe (4-week plan) - User adds 2 Bags subscribe → **one line: 3 Bags @ 8-week plan, \$35.95/ea**

If combined qty $>$ 3 — a **separate line** is created (no merge).

When quantity changes via cart drawer (+ / - buttons) — the plan also auto-swaps to the correct one for the new quantity.

Checklist After Changing Discounts

- ☐ Customizer — Save
- ☐ EPD — all relevant functions updated
- ☐ Loop — discount updated in plan (if subscription was touched)
- ☐ Open the product in **incognito** — verify the price on the page
- ☐ Add to cart — verify the price in the cart
- ☐ Proceed to checkout — verify the final amount
- ☐ Subscription — verify the correct plan ID was assigned for each quantity
